Weekly Coal Production

Energy Information Administration
Washington, D C

Production for Week Ended:
September 7, 1985

Highlights

U.S. coal production in the week ended September 7, 1985, as estimated by the Energy Information Administration, totaled 15.79 million tons (bituminous coal and lignite, 15.73 million tons; Pennsylvania anthracite .06 million tons). This was 10.6 percent lower than the previous week due to the Labor Day holiday, and was 8.9 percent lower than in the corresponding week of 1984.

Cumulative U.S. coal production from January 1 through September 7, 1985 was estimated at 604.25 million tons, 4.8 percent below the 635.04 million tons produced in the comparable period in 1984.

The methodology used to make weekly estimates of coal production was last published in the Weekly Coal Production (DOE/EIA-0218(84/40)).
